How do technology and organization interact to shape organizational structures and processes? What organizational, political and social processes constrain technological development? What forces shape the articulation of organizational and technological systems? Answering these and other pivotal questions, this volume centres on the role of theory for advancing our knowledge of communication technology in organizations at several levels - micro, group and macro. The distinguished contributors examine richly diverse topics, including telecommunications, communication networks and new media, the use of group decision support systems and discretionary databases.

Communication in organizations has changed drastically since the release of the first edition of this bestselling textbook. This fully revised and updated edition delves into state-of-the-art studies, providing fresh insights into the challenges that organizations face today. Yet this foundational resource remains a cornerstone in the examination of classic research and theory in organization communication.

A comprehensive survey research book that incorporates survey design, implementation, data management, and data analysis, this text is based in sociological research and contains extensive examples throughout. This book examines the uniqueness of each research topic and the fact that when doing such research, there is a need to make decisions about the many unique situations while trying to answer the research question. Each chapter is framed by addressing the decisions that need to be made depending on the various challenges that may arise as the survey study is developed.

Appreciated by thousands of thoughtful students, successful managers, and aspiring senior leaders around the world Communicating for Managerial Effectiveness skillfully integrates theory, research, and real-world case studies into models designed to guide thoughtful responses to complex communication issues. The highly anticipated Sixth Edition builds on the strategic principles and related tactics highlighted in previous editions to show readers how to add value to their organizations by communicating more effectively. Author Phillip G. Clappitt (Blair Endowed Chair of Communication at the University of Wisconsin-Green Bay) addresses common communication problems experienced in organizations, including: Communicating about major changes spanning organizational boundaries Selecting the proper communication technologies Transforming data into knowledge Addressing ethical dilemmas Providing useful performance feedback Structuring and using robust decision-making practices Cultivating the innovative spirit Building a world-class communication system

Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database.

Providing a practical and step-by-step guide to collecting and managing qualitative data, this book focuses on the three most often used forms of qualitative methods: participant observation, in-depth interviews, and focus groups. Designed to be very applied, this textbook includes many checklists and tips for how to use each technique while doing research. It also includes numerous real-life examples and cases so that the reader will benefit from seeing the broader picture. Collecting Qualitative Data: A Field Manual is intended both for beginning researchers and the more experienced research collector.

'A great basic book, which can be used by the novice qualitative researcher. The advice is friendly, almost folksy with clear conceptual explanation of how the program works. A very welcome contribution to this field' - Martha Ann Carey, Albert Einstein College of Medicine, New York 'Qualitative researchers continue to be criticized because they rely too much on their own interpretations and avoid analytical and theoretical issues. This book provides ways to integrate the thinking about a project and the data you have with practical ways that the software can facilitate the process. I recommend it for both the new user as well as the experienced one' - Marilyn Lichtman, Forum for Qualitative Social Research - follow the link below to read the complete review This book invites readers to learn how to use qualitative data analysis software in the context of doing their research project. The reader follows basic steps for creating and conducting a real project with real data, using the new-generation software package, QSR NVivo. The software tools are introduced only as needed and explained in the framework of what is being asked. The reader is the craftsperson, trialling those tools in the processes of getting started, tentative interpretation, drawing links, shaping data, and seeking and establishing explanations and theories. The NVivo Qualitative Project Book allows the researcher to work through their own project, or work with data provided from a real project. The authors draw on decades of experience of research and training researchers around the world, and take the reader through each step in a style combining informality and authority, with frequent tips and reflections on what is being done. Demonstration software is provided on the enclosed CD-ROM, with data to help create (a researcher's project) a project about researchers and researching, and with multiple stages arranged sequentially in the development of a real project. As a practical tool to help researchers understand qualitative data analysis software using NVivo, and a guide through the sometimes complex processes of doing a research project, this book will be invaluable reading for researchers and students undertaking qualitative research. Pat Bazeley provides training and consulting services in research design and data analysis through her company, Research Support. Lyn Richards is Director of Research Services at Qualitative Solutions and Research, the developers of NUD-IST and NVivo software. NVivo is distributed by Scolari, SAGE Publications Software.
