Peripheral Neuropathies in Clinical Practice - Steven ...

Peripheral neuropathies in clinical practice. Pascuzzi RM (1). Based on the history and physical examination, it is often possible to arrive at a relatively specific diagnosis of peripheral neuropathy. The clinical history and examination are often sufficient to create a more focused and appropriate laboratory evaluation, counseling for the patient as to long-term prognosis, and options for clinical management.

The complaints of "numb feet" and "burning toes" are common in clinical practice, with a prevalence of approximately 2,400 per 100,000 (2.4 percent) of the population. 1 Peripheral neuropathy (PN) refers to a group of disorders (polyneuropathy, single and multiple mononeuropathies, and polyradiculopathy) resulting in altered function and structure of peripheral motor, sensory, and autonomic nerve fibers.

### Peripheral Neuropathy: Asking the Right Questions ...

Peripheral neuropathy is one pattern of damage to the peripheral nervous system.<sup>1</sup> Physical signs of peripheral neuropathy are common in older people.<sup>2</sup> Recognition of these deficits is particularly important because peripheral neuropathy may contribute to the vulnerability to falls that is common in this age group.<sup>3,4</sup> More than 30% of patients aged over 65 years will fall at least once per year.<sup>5</sup> Peripheral neuropathy commonly causes impairment of proprioception and balance, which can be ...

### Peripheral neuropathy in older people | Causes & Management

Peripheral neuropathy develops when nerves in the body's extremities, such as the hands, feet and arms, are damaged. The symptoms depend on which nerves are affected. In the UK it's estimated almost 1 in 10 people aged 55 or over are affected by peripheral neuropathy. The peripheral nervous system

## GUIDELINES ON PERIPHERAL NEUROPATHY

Peripheral neuropathy can result from traumatic injuries, infections, metabolic problems, inherited causes and exposure to toxins. One of the most common causes is diabetes. People with peripheral neuropathy generally describe the pain as stabbing, burning or tingling. In many cases, symptoms improve, especially if caused by a treatable condition.
